ReactJS – Introduction Assignment

Problem Statement:

You work in XYZ Company as a Front End Developer. The company officials want you to build a web application that allows users to add to do on the application

Tasks to be performed:

1. Create an HTML page with basic HTML skeleton

2. Create a JavaScript file which is linked in the HTML page

3. Inside the HTML page create a form that has an input and a submit button

4. Inside the JavaScript create DOM elements as a list item which contains the text inside an input box of the form which is added to the DOM when the button is clicked

5. When the todo item is clicked it should have a strikethrough to indicate it has been completed
